

PATIENT-CENTERED CARE.

Setting the standard for personalized, compassionate care in medical imaging.

While Servant Medical Imaging always lives up to its obligations as a medical service provider, our purpose is to take care of people. One way we do this is by providing quality imaging and fast, accurate and reliable results. The other way we take care of people is by being completely focused on their needs and treating them with the compassion, individualized attention and personal touch they deserve.

Putting our hearts into caring for the needs of others.

We exist to serve the communities in which we live and work. For all of us here at Servant Medical Imaging, this means caring for people. People are at the heart of healthcare... and we put our hearts into making sure they are well cared-for and that they always know they are special. We bring a strong sense of family and Christian values to what we do, with genuine compassion for others. We treat each person the same way we would want to be treated ourselves and the same way we would treat our own family members.

Earning patients' trust with honesty, personal involvement & unwavering ethics.

The fact is, regardless of where a doctor sends a patient, patients can choose where they go for their medical imaging exams. And people will talk about their imaging provider to their friends and neighbors. We're proud that a large number of our patients have been referred by people who have come to trust our quality and our patient-centered care. They know that our caring, friendly professionals will cater to their needs and comfort. They know that we'll treat their friends and loved ones with kindness, respect and a personal investment in their well-being. And they know we'll stand firm on our strong sense of ethics, always dealing directly and honestly and doing what we say we're going to do.

For more information about how Servant Medical Imaging provides a caring, supportive environment while catering to patients' needs and comfort, don't hesitate to call one of our imaging centers today.
